## Profile

Self-driven Junior Backend Developer with 1–2 years of hands-on experience designing and maintaining scalable web APIs using Node.js, Express.js, and Java (Spring Boot). Strong grasp of both NoSQL and SQL databases, including MongoDB, PostgreSQL, and MySQL. Demonstrates solid debugging skills, API design proficiency, and a growing command of Java-based enterprise systems. Comfortable working in collaborative or solo environments. Familiar with Docker, Git, and Postman, and committed to continuous learning.

## Technical Skills

- Languages: JavaScript, Java, HTML, CSS
- Frameworks: Express.js, Spring Boot
- Databases: MongoDB, PostgreSQL, MySQL
- Tools: Git, Postman, Docker, Maven, VS Code
- Deployment: Vercel, Render
- Other: RESTful API Design, Debugging, JWT Authentication, Role-based Access, Troubleshooting

## Education

B.Sc. Microbiology  
Olabisi Onabanjo University – 2023

## Projects

### Akello (E-Commerce Backend)

Built and documented a complete e-commerce API using Node.js, Express.js, and MongoDB. Implemented product management, cart functionality, user authentication with JWT, and admin role support.

View API Docs: <https://documenter.getpostman.com/view/43208616/2sB2jAa7rB>

### Achan (Booking System API)

Designed appointment scheduling and real-time availability logic. Integrated email notifications, calendar handling, JWT-based authentication, and admin management. Developed using Node.js and Express.js.

### **Eti-mobile (Ride-Sharing Platform)**

Built backend routes for users, riders, and companies with OTP verification and secure role-based access control. Contributed to user-flow design and API structure. (Private Repository)
